Dear Examiner

It looks like your inventor at one time had a newspaper column on patents and inventing. I found a couple of articles the looked interesting. Check out storyopolis.com you can add things to the gift basket of course I couldn't get it to work.

If you have an questions or need a refocused please feel to contact me.

IN THE CLAIMS

For the convenience of the Examiner, all pending claims of the present Application are shown below.

1. **(Previously Presented)** A method for conducting a transaction, comprising:
presenting a plurality of gift sets to a purchaser, each gift set comprising a plurality of articles;
wherein each gift set may be customized according to a plurality of specific criteria;
receiving a selection from the purchaser, the selection comprising at least one of the plurality of gift sets;
receiving identification information regarding a recipient of the gift set;
electronically communicating a notification to the recipient, the notification including a unique identifier; and
scheduling delivery of the selection to the recipient, if the recipient accepts the gift set.
2. **(Withdrawn)** The method of Claim 1, further comprising allowing the recipient to select an alternative item if the recipient rejects the selection.
3. **(Withdrawn)** The method of Claim 1, wherein each gift set may be customized according to a plurality of specific criteria, and further comprising receiving at least one of the specific criteria regarding the selection, from the purchaser.
4. **(Previously Presented)** The method of Claim 1, further comprising receiving at least one of the specific criteria regarding the selection, from the recipient.
5. **(Withdrawn)** The method of Claim 1, further comprising issuing the notification to the recipient via electronic mail.
6. **(Withdrawn)** The method of Claim 5, wherein the notification includes a hyperlink to a virtual showroom and wherein the recipient may accept or reject the gift set by communicating with the virtual showroom.

31. (New) The method of Claim 30, wherein the personal information includes shipping information.

32. (New) The method of Claim 31, wherein the shipping information is selected from the group consisting of name, address and delivery method.

33. (New) The method of Claim 1, wherein the plurality of articles of each particular gift set comprise articles that are complementary to each other.

34. (New) The method of Claim 4, wherein the plurality of articles of each particular gift set comprise articles that are complementary to each other.

VIRTUAL SHOWROOM SYSTEM AND METHOD

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a method for
conducting a transaction which includes presenting a
plurality of gift sets to a purchaser, wherein each gift
set comprises a plurality of articles. A selection may
be received from the purchaser, the selection comprising
at least one of the plurality of gift sets. The method
may also include receiving identification information
10 regarding a recipient of the gift set. A notification
including a unique identifier may be issued to the
recipient. In accordance with a particular embodiment,
if the recipient accepts the gift set, delivery of the
selection to the recipient may be scheduled.

Abstract (Basic): US 5857219 A

A hat (10) comprises a crown member (20) with an outer crown layer and an internal periphery (20A), one half of a fastener (37) fixed to the internal periphery, elongated support members (39) for supporting the hat on a user's head each having a second half of a fastener (37) on one end and a free second end and resilient members for stretching the crown to remove wrinkles.

USE - Collapsible hat for easy carrying in a pocket, purse or handbag.

ADVANTAGE - The wearer's hairstyle is not adversely affected by wearing the hat.

Abstract (Basic): US 5822797 A

The hat (10) has a crown (20) whose internal periphery supports the portion of the head of the wearer. The crown is supported on the head of the wearer by multiple support members (39).

A brim (11) is fixed to the crown. The tail end of the support members is projected out from the internal periphery of the crown.

ADVANTAGE - Avoids undue adverse effect on wearer's hair. Enables easy folding of hat.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 5800503	A		8	A61N-001/00	

Abstract (Basic): US 5800503 A

The apparatus (2) has a receiver which receives a variable audio output signal (4). A pulse generator generates electrical pulses which vary in response to variable audio output signal. Two nodes are coupled to the pulse generator to pass electrical pulses to a current conducting circuit.

The current conducting circuit is created when one person (10a) touches the first node, and makes contact with another person (10b) touching the second node, thereby providing pleasing variable stimulation to the two persons at the point of contact. Two control units are coupled to the two nodes respectively to adjust the magnitude of electrical pulses appearing at the respective nodes.

ADVANTAGE - Enhances mood of romantic setting by employing music. Enables stirring people to physical contact such as kissing.

Abstract (Basic): US 5657490 A

A hat (10) comprises a crown (20) with an internal periphery (20a), a first half of an inter-engageable fastener (37) fixed to the inner periphery and elongated support members (39), e.g. 3-25, pref. 5-10 members for supporting the hat on the wearer each with a first end having a second half of an inter-engageable fastener (37) and a second end (39a) extending from the periphery for engaging the head of a wearer without disturbing the hair.

USE -The hat has internal supports for holding the crown away from the hair of the wearer.

ADVANTAGE - The proposed hat keeps the hair undisturbed.

Abstract (Basic): US 5634479 A

The method for displaying at least one decorative element on a decorative ornament having a number of circular holding members with openings, comprises the steps of threading the decorative element through the opening of at least one holding member.

The next step is positioning the decorative element relative to the holding members, and drawing the decorative element between uninterrupted regions of the holding members.

ADVANTAGE - Provides an easy and attractive way to use a decorative element to ornament an outfit or hair style.

US 5524651	A		7	A45D-008/24	CIP of application US 9316519

Abstract (Basic): US 5524651 A

The method comprises the steps of threading a decorative fabric element through at least one opening of a number of holding members of a decorative ornament. It involves drawing the decorative element between uninterrupted regions between the holding members and attaching the decorative element to a user using a coupling member, the holding members coupled to a portion of the coupling member.

The step of threading a decorative fabric element comprises the step of tying a number of decorative fabric elements to the holding elements. The step of threading a decorative fabric element comprises the step of threading a scarf through at least one opening of a number of holding members.

ADVANTAGE - Works with a wide variety of decorative fabric elements, e.g. scarves of various sizes and shapes may be easily substituted and displayed.

Abstract (Basic): US 5441061 A

The decorative ornament for displaying at least one removable

decorative element comprises two opposing arms for affixing the decorative ornament to a user for display. The arms each have first and second portions, and a spring also has first and second protruding end portions. A rod passes through said first portion of each of said arms and said spring such that said first and second protruding end portions of said spring push on said first portions of said arms so as to bias said second portion of said arms together.

A number of loops extend from an outer surface of each of said arms, said loops being spaced apart by uninterrupted regions between adjacent loops such that the decorative element may pass through said uninterrupted regions between adjacent holding members. The arms further comprise teeth spaced apart along said second portion of said arms.

ADVANTAGE - Holds securely in hair.

Abstract (Basic): US 5345956 A

The hair pin comprises a platform having an upper surface being slanted upwardly and backwardly such that the platform occupies a space above the hair binding element when the hair pin is attached to the hair binding element on the head. It has at least two prongs including at least one front prong and at least one rear prong. The prongs extend downwardly from an underside of the platform. At least one rear prong is disposed adjacent to the head of the user. At least one front prong is disposed outward from each rear prong and outward from the head of the user. The front and rear prongs are positioned to accommodate the hair binding element in between.

At least one front prong and one rear prong includes a stop for engaging the hair binding element, whereby a relative vertical position of the hair pin is maintained when the hair binding element is accommodated between the front and rear prongs and is engaged by the stop.

USE - For attachment to a hair binding element used to form a hair tail on a user's head.

JP 8503387	W		20	A45D-008/02	Based on patent WO 9406320

Abstract (Basic): US 5251650 A

The hair pin comprises a platform, and at least one front prong and at least two rear prongs. Each prong extends downwardly from an underside of the platform. Each rear prong is disposed adjacent to the head of the user. Each front prong is disposed outward from each rear prong and outward from the head.

The elastic hair binding element is accommodated between the front and rear prongs. At least one front prong includes a stop for engaging the elastic hair binding element. The stop engages the elastic hair binding element including at least one inwardly protruding tab disposed on the front prong below the platform with a section between.

USE - For attachment to an elastic hair binding element used to form a hair tail on a user's head.

Dwg.2/10

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 5036870	B1		3	A45D-008/34	

Abstract (Basic): US 5036870 A

The tool comprises an elongate probe having a first end and a second end. The probe is for insertion in a hair tail at a distance from the end of a hair tail to guide with little friction through the hair. It has a loop defining an opening and having an underformed, original shape and is attached to the probe at the second end. The end of a hair tail inserted through the loop and the probe and loop pulled through a hair tail to invert a hair tail.

The loop is formed of a resilient material which allows it to deform as it passes through a hair tail under the influence of the external forces and rebound to its original shape when those forces have been removed. The opening through the loop conforms to a hair tail.

USE - A tool for inverting a hair tail of hair by the application of external force, the hair tail having a end. (4pp Dwg.No.1/2c)

Title Terms: HAIR; STYLE; TOOL; COMPRISE; CYLINDER; PROBE; ATTACH; LOOP; THROUGH; HAIR; TAIL; PASS

Priority Applications (No Type Date): SE 7711411 A 19771011

Abstract (Basic): SE 7711411 A

Heat and chemical recovery is improved in the two stage pyrolysis of spent alkaline liquor (from the production of cellulose pulp) the spent liquor having been previously evaporated to 40% concentration, by (a) carrying out the first stage in a reactor with high temperature oil converting the sulphur content to hydrogen sulphide and recovering the

heat by heat exchange to raise steam; and (b) taking the resultant products from the first stage to a second reactor for evaporation and separation of the sodium carbonate which can be used for further preparation of digesting liquor.

Title Terms: PYROLYSIS; RECOVER; SODA; CELLULOSE; MANUFACTURE; PYROLYSIS; WASTE; LIQUID; FIRST; REACTOR; REDUCE; SULPHUR; FOLLOW; HEAT; EXCHANGE; SEPARATE; SODA; SECOND; REACTOR

Abstract (Basic): US 20050175269 A1

NOVELTY - An absorbent article, comprises a chassis; at least one sidewall adjacently disposed to the chassis; and at least one handle for assisting in the application of the article onto a wearer where the handle is disposed adjacent to either the chassis or sidewall.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a kit for toilet training an infant, comprising the article in the form of a training pant, and an instruction to the caregiver for transitioning the infant to proper toilet use.

USE - The absorbent article, e.g. training pant, diapers, napkin, pantliners, adult incontinence articles e.g. brief, or feminine hygiene articles, is used for making a kit for toilet training an infant (claimed). It is used for receiving and containing urine and other bodily exudates.

ADVANTAGE - Upon activation of the opening, the absorbent articles may be presented individually or multiply for removal from the kit. Regardless of such presentation, the handle will be visible and graspable. The handle may be presented by the manner in which the kit is opened. The handle may be presented in a manner in which the article is folded and/or stacked within the kit. The handle may be presented by the mere **size**, shape, or position of the handle. The absorbent articles are positioned in a uniform manner within the kit (i.e. the articles are folded similarly and bound uniformly) with the waist edge being presented. In such a case, a handle as a tab along the waist edge would be readily accessible to a wearer or caregiver. The tab may be grasped and used to remove the article from the kits. Subsequently, a second article containing a tab would be **presented** from the **kit**.

DESCRIPTION OF DRAWING(S) - The figure is a perspective view of an absorbent article having the handle as a flap.

Pull-on (20)

Flap (200)

Abstract (Basic): WO 200558472 A2

NOVELTY - The production of a fine particle material involves introducing at least one substance contained (e.g. dissolved or dispersed) in at least one fluid(s) into a vessel containing at least one section(s) comprising a material; and causing and/or allowing the substances to precipitate at least partly as primary particles on the surface of the material. The fluid(s) is in a supercritical state before or after introducing into the vessel.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) an apparatus comprising at least one device(s) adapted to carry out the production of the particles;

(2) a tape cast for tape casting comprising primary particles deposited on a carrier film;

(3) an item having a hard nanocrystalline coating comprising

primary particles of alumina and zirconia, where the coating has a hardness of at least 10 (preferably 25) GPA or has a scratch and wear resistance of at least 30 (preferably 45) N; and

(4) a mechanical part with the hard nanocrystalline coating, where the coating is applied to the surface of the material.

USE - Used for the production of fine particles; in tape cast for tape casting suitable for production of ceramic material, e.g. piezomotor; in mechanical parts (claimed).

ADVANTAGE - The process provides the fine particles in large scale with sufficient homogeneity and reproducibility at affordable costs.

DESCRIPTION OF DRAWING(S) - The figures show an example of a vessel containing a high surface area fiber material, a randomly packed fiber material, a reactant adsorbed to the fiber material, primary particles formed on the surface of the fiber, and harvesting of the deposited particles.

US 20050059095 A1 C12Q-001/68 Provisional application US 2003487452

Abstract (Basic): WO 200506960 A2

NOVELTY - A method for multiplexed detection of membrane-associated receptors comprises:

providing an array of encoded microparticles of distinguishable types, contacting the array with an analyte solution, removing the analyte solution, incubating the array with at least one labeling agent, removing unbound labeling agent, detecting the presence of labeling agent on microparticles, and decoding the labeled microparticles.

DETAILED DESCRIPTION - The method for multiplexed detection of membrane-associated receptors comprises:

(1) providing an array of encoded microparticles of distinguishable types, where the microparticles display membrane fragments containing membrane-associated antigens, and where different membrane fragments which originate from different cell types or from different individuals are displayed on distinguishable types of microparticles;

(2) contacting the array with an analyte solution containing ligands capable of binding to the membrane-associated antigens to form antigen-ligand complexes;

(3) removing the analyte solution;

(4) incubating the array with at least one labeling agent capable of binding to the antigen-ligand complexes;

(5) removing unbound labeling agent;

(6) detecting the presence of labeling agent on microparticles to determine the presence or absence of ligands on the microparticles; and

(7) decoding the labeled microparticles in order to determine the type of membrane-associated antigens contained within different membrane fragments displayed on distinguishable microparticle types.

INDEPENDENT CLAIMS are also included for the following:

(1) a method for determining the relative amount of panel reactive antibodies in serum;

(2) a method of affixing cell membrane fragments to the surface of a microparticle where, for the majority of the fragments, the outer surface of the membrane faces away from the surface;

(3) a method of multiplexed detection of autoantibodies in serum; and

(4) a method for determining the presence of anti-T cell or anti-B cell antibodies in the serum of a transfusion or transplant recipient.

USE - The method is useful for multiplexed detection of membrane-associated receptors (claimed) for diagnosing diseases or for drug discovery.

Abstract (Basic): JP 2004240816 A

NOVELTY - A memory stores meeting time set individually by several experts, and a presentation unit presents each stored time to **corresponding** expert who has set the time. A notification unit transmits an email indicating updating of set meeting time by **corresponding** expert, to other experts, when set time is updated. The stored meeting time are presented to all experts, when they are perfected by **corresponding** experts.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) expert meeting assistance apparatus;
- (2) expert meeting assistance method;
- (3) expert meeting assistance program; and
- (4) recorded medium storing expert meeting assistance program.

USE - For assisting expert meeting held in accordance with good clinical practice (GCP) specification, for clinical trial/study.

ADVANTAGE - Promotes rapid meeting time preparation, while ensuring security with respect to set meeting time.

DESCRIPTION OF DRAWING(S) - The figure explains the operation of the expert meeting supporting system. (Drawing includes non-English language text).

Abstract (Basic): WO 200448600 A2

NOVELTY - Diagnosing inflammatory bowel disease (IBD) comprises determining whether a sample obtained from a mammal is positive for anti-flagellin antibodies (AFA) and diagnosing the individual as (likely) having IBD when the sample is positive for AFA and as (probably) not having IBD when the sample is negative for AFA.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a test kit for determining the concentration of AFA present in a sample comprising a substrate comprising a coating of purified flagellin, a standard with a known concentration of AFA, a detection antiserum labeled with a chromogenic indicator capable of **color** development when exposed to a developing solution, a developing solution, and an assay wash buffer; and

(2) a method comprising contacting a sample obtained from a mammal with a substrate coated at least in part with purified flagellin, contacting the substrate with a detection antiserum labeled with a chromogenic indicator capable of **color** development when exposed to a developing solution, contacting the developing solution with the substrate, and detecting the presence of AFA.

USE - The method and test kit are useful for diagnosing inflammatory bowel disease in a mammal (claimed).

JP 2002370916	A		10	A61K-006/08	

Abstract (Basic): EP 1262162 A2

NOVELTY - Kit for making dental prostheses contains:

- (1) polymerizable matrix material,
- (2) filler and
- (3) **color** composition(s)

in spatially separated form

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for:

- (1) **color** compositions in the form of a compressed molding containing colored pigment(s) bound to polymer particles, particulate binder and filler;
- (2) **color** compositions in the form of a paste or fluid dispersion containing colored pigment(s) bound to polymer particles, binder and filler;
- (3) the production of dental prostheses by:
 - (i) applying a colored pigment to the surface of polymer particles,
 - (ii) combining the pigment-coated particles with a binder and conversion to a fluid or pasty dispersion or tablets,
 - (iii) mixing one or more dispersions, tablets and/or parts of tablets with a polymerizable matrix material and filled,
 - (iv) molding the mixture to a dental restoration or part of this and
 - (v) curing.

USE - The **color** compositions are used for individual coloration of dental gum-colored prostheses or prosthesis parts (claimed). The prostheses are especially useful as the base for dental restorations to which teeth are attached and also for protective prostheses, e.g. for sport.

ADVANTAGE - In dental technology, prostheses are colored individually to match the situation in the patient's mouth, with the emphasis is on the teeth and only an approximate match for the gums. The only existing systems giving a better match are coatings. The present materials are completely colored, i.e. not only on the surface. Using the **present kit** ensures homogeneous mixing and a streak-free **color**, even if small amounts of **color** composition are used, without increasing the cost of mixing compared with commercially-available 2-component systems.

Abstract (Basic): US 20020119936 A1

NOVELTY - A composition comprises dehydroepiandrosterone (I) ,
ubiquinone (II) and/or their salts and carrier or diluent.

DETAILED DESCRIPTION - A composition comprises
dehydroepiandrosterone of formula (I), ubiquinone of formula (II)
and/or their salts and carrier or diluent.

broken line=single or double bond;

R=H or halogen;

R1=H or SO2OM;

M=H, Na, sulfatide, -SO2O-CH2CH(OCOR2)CH2OCOR3, or phosphatide

-P(=O)2-OCH2CH(OCOR2)CH2OCOR3;

R2+R3=1-14C alkyl or glucuronide

4,5-dihydroxy-3,5-dimethyl-tetrahydro-pyran-2-yl; and

n=1 - 12 (preferably 10);

The H at position 5 is present in the alpha or beta configurations
or the compound of chemical formula (I) comprises a racemic mixture of
both configurations.

An INDEPENDENT CLAIM is also included for a kit comprising the
composition and a delivery device.

ACTIVITY - Anti-inflammatory; Antiallergic; Antiasthmatic; Cytostatic.

Young adult male Fischer 344 rats (120 grams) were administered dehydroepiandrosterone (DHEA) (300 mg/kg) or methyltestosterone (40 mg/kg) in carboxymethylcellulose by gavage once daily for 14 days. Folinic acid (50 mg/kg) was administered intraperitoneally once daily for 14 days. On the fifteenth day, the animals were sacrificed by microwave pulse to the cranium, which instantly denatured all brain protein and prevented further metabolism of adenosine. Hearts were removed from animals and flash frozen in liquid nitrogen with 10 seconds of death. Liver and lungs were removed and flash frozen with 30 seconds of death. Brain tissue was subsequently dissected. Tissue adenosine was extracted, derivatized to 1, N6-ethenoadenosine and analyzed by high performance liquid chromatography (HPLC) using spectrofluorometric detection according to the method as described in Clark and Dar (J. of Neuroscience Methods 25:243 (1988)). The results of these experiments indicated that rats administered DHEA or methyltestosterone daily for two weeks showed multi-organ depletion of adenosine. Depletion was dramatic in brain (60% depletion for DHEA, 34% for high dose methyltestosterone) and heart (37% depletion for DHEA, 22% depletion for high dose methyltestosterone). Co-administration of folinic acid completely abrogated steroid-mediated adenosine depletion. Folinic acid administered alone induced increase in adenosine levels for all organs studied.

MECHANISM OF ACTION - Asthma inhibitor.

USE - In an in vivo therapeutic or prophylactic method for prevention or treatment of a disorder or condition associated with abnormal levels of adenosine, adenosine receptors, sensitivity to adenosine in a subjects tissue(s), bronchoconstriction, lung inflammation, allergies, wheezing, difficult breathing, impeded airways, asthma, COPD, CF, ARDS, RDS, decreased lung surfactant, pulmonary fibrosis, allergic rhinitis, and cancer in a subject e.g. human or non-human animal (all claimed).

ADVANTAGE - The composition reduces or depletes adenosine levels or increase ubiquinone levels. The composition alters the level of or sensitivity to adenosine or adenosine receptor in a subject's tissue. The composition is effective, easy to administer, is non-toxic and cost-effective.

Abstract (Basic): WO 200190294 A1

NOVELTY - A kit for caring for a fabric **article** comprises a laundry detergent composition and/or fabric conditioning composition, and a fabric treatment composition. Each composition is provided in a separate container. The three compositions comprise a **coordinated** element.

DETAILED DESCRIPTION - A kit for caring for a fabric **article** comprises a laundry detergent composition and/or a fabric conditioning composition, and a fabric treatment composition. Each composition is provided in a separate container. The fabric treatment composition can be a bleaching composition, a **color** fixative composition, a dryer sheet composition, a finishing composition, and/or a pre-treating composition. The laundry composition, the fabric conditioning composition, and the fabric treatment composition comprise a **coordinated** element that can be a brand name, a characteristic ingredient, container graphics, containers, dosages per container, a dye, a **perfume**, a trade dress, a set of usage instructions, or its combination.

USE - For caring or cleaning fabric article.

ADVANTAGE - The use of the invented kit provide one or more improved fabric care results, such as improved cleaning, whitening, softness, malodor elimination, perfume fragrance retention and release, **color** retention, stain removal, ease of ironing, static reduction, etc. Such benefits mat is especially significant and noticeable after multi-cycle application to the same fabric article. In addition, as the multiple products are sold together as a fabric care kit, it may significantly reduce consumer confusion regarding synergistic fabric care combinations. Furthermore, such a fabric care kit may reduce undesirable cross-reactions and interactions between incompatible ingredients. In addition, the multiple products in the present kit are typically compatible with each other, as well as with all types of natural and artificial fabric articles, such as those formed from cotton, nylon, rayon, wool, and silk, and may be advantageously **personalized** and/or **customized** to provide synergistic care for specific fabric articles, or specific consumers.

Abstract (Basic): DE 4228088 A

Openings (21) to hold the **article** are punched out from the lower and/or upper support plates with an opening edge (11') which over a section of the support plate has an upper flanged area (12') which declines inwardly into the support and narrows up to a predetermined minimum opening cross-section **corresponding** to the cross-section of the **article** there.

The opening edge is continued by an adjoining lower flanged area (13') of this section at a distance beneath the upper support plate and is bent sideways radially outwards so that the opening cross-section widens out to form a laterally protruding guide section for the section of the article (10') which is to be removed.

The blanks making up the support plates can be made from solid cardboard with a thickness of 0.3 to 0.7 mm or from micro corrugated board with a thickness of 1.2 to 1.8 mm. The double flanged areas of the opening edges can be formed by hot shaping.

USE/ADVANTAGE - The articles in the display pack are adequately protected and can be removed from the opening without damage.

ABSTRACT

PROBLEM TO BE SOLVED: To provide ultrasonic diagnostic equipment in which setting can be registered or changed for each operator and an operator who **sets** the **present** operation of the equipment is easily identified in the case of utilizing the same equipment by a plurality of operators.

SOLUTION: In the ultrasonic diagnostic equipment, in the case of utilizing the same equipment by a plurality of Doctors on time base or day base, setting of the equipment liked by **individual** Doctors is registered beforehand in a memory 15 for recording the name of Doctor, a memory 16 for presetting recording and a memory 17 for **color** recording, and presetting of one's own is read. Thus, setting is changed in a simple manner, and setting of presetting data selected and displayed presently can be identified with the name of the Doctor and **color** on a display screen in accordance with the Doctor recorded in a memory 18 for recording a selecting Doctor.

ABSTRACT

PROBLEM TO BE SOLVED: To provide an ordering system for allowing a sender side to freely select merchandise **corresponding** to the sending destination to establish a **set gift**, and to freely select the box or wrapping of the gift to send the **personalized** gift.

SOLUTION: This system is provided with a gift establishment condition inputting means for displaying the list of condition candidates for carrying out a series of ordering processing including information associated with merchandise conditions and information associated with **accessory** conditions and information associated with payment method conditions at user terminal equipment, and for accepting the selection of the condition candidate from among them and an ordering information registering means for retrieving a data storage device based on the selected condition candidate, and for displaying the list of the pertinent merchandise information and 3D merchandise images and the list of the **accessory** information and 3D **accessory** images, and for registering ordering information prepared based on the merchandise information and the **accessory** information selected from the list and the payment method information in the data storage device.

ABSTRACT

PROBLEM TO BE SOLVED: To easily prepare, edit, update and **customize** a multimedia presentation.

SOLUTION: The method is for **customizing** a **presentation** of a **set** of digital images provided by a user. It includes a step of selecting initial presentation format **criteria** with respect to the set of digital images by the user, a step of analyzing the digital images for additional information, a step of providing to the user a first portable electronic storage medium 15 storing the set of digital images wherein the digital images can be outputted to the user on display devices 20, 25 and 30 in accordance with a first presentation format based upon the initial selected presentation format **criteria** and analysis of the additional information, and a step of providing a software program to the user enabling the user to

select additional presentation format **criteria** .

ABSTRACT

PROBLEM TO BE SOLVED: To provide the **gift set** of a bag and a pouch, which is sold by a system for permitting a gift side to select the **color** pattern of a commodity and a gifted side to select the shape of it and easily displayed in a short time and also by which the multiple commodities are displayed even in a narrow display space without requiring the wide display one.

SOLUTION: The texture to be **tailored** 2 of the bag and a pouch is contained inside a transparent package 1 displayed by hanging so as to be viewed from the outside of the package 1 and, moreover, the sample catalog 3 of the bag and the pouch and the stamped addressed envelope 4 of texture to be **tailored** 2 are contained. The multiple commodities are displayed as compared with a case where the completed bag and the pouch are displayed in a commodity shelf so that the gift side flexibly selects the **color** pattern of the commodity and the gifted side can select the favorite shape of the commodity from the sample catalog.

ABSTRACT

PROBLEM TO BE SOLVED: To perform management to cover the time based on the number of stocks and article-related information until the number of articles in a stock at a new input time runs out even when parts in a pass box outputted to a manufacturing line remain.

SOLUTION: A stock managing film is prepared to specify the number of stocks in a storage place, consisting of the number of **article** containing pass boxes at a point of time when the pass **box** is **present** in a storage place and the number of **article** containing pass boxes at a point of time when the pass box is absent in a storage place, from a discriminate code **individually** marked on each pass box. The number of **article** containing pass boxes is set at the number of stocks in a storage place **corresponding** to the discrimination codes of input pass boxes during input of new **articles** and the number of stocks in a storage place is set to 0 (step 1). By subtracting the current number of consumed **articles** from the number of stocks in a storage place for outputting pass boxes, the number of stocks in a storage place for an output pass box is written. The number of socks in a storage place for an output pass box is set to 0 (step 6). Based on the number of stocks in each stock plate and the number of stocks outside a storage place **corresponding** to all discrimination codes, the number of stocks is determined.

ABSTRACT

PURPOSE: To obtain certain multicolour simultaneous recording easily by a method wherein an ink ribbon which destroys a wall substance of a microcapsule group containing a **set dye presenting** (n+1) colours with the **set dye presenting** (n) colours in the same way as the wall substance of a microcapsule group containing **individually** a colour erase agent erasing (n) colours, is prepared.

CONSTITUTION: Two or more kinds of respective microcapsule 3, 4, 5, 6, 7, 8

to be selected from a microcapsule group containing individually one or more kinds of dyes to be selected from acidic dye, basic dye, and sublimate dye by combining on a side surface of a film like ribbon substrate 2, and one or more kinds of respective microcapsules 9, 10 to be selected from a microcapsule group containing individually a **colour** erase agent for erasing a **colour** of each set dye, are uniformly contained. Wall substance of the microcapsule group 3, 4, 5, 6, 7, 8 containing a **set** dye **presenting** (n+1) colours is destroyed in the same way as the wall substance of the microcapsule group 9, 10 containing **individually** a **colour** erase agent for erasing (n) colours **presented** by a **set** dye **presenting** (n) colours.

ABSTRACT

PURPOSE: To check the circulation of slips by having comparison with a comparison means between the circulation counted by a counting means which counts the number of slips to be issued and the circulation which is supplied by a circulation input means.

CONSTITUTION: An operator studies the contents of an application for gift articles to designate the cancel or addition of the **gift** receivers and **sets** the application to an automatic original feed mechanism to designate the **style** of forms and sorting method of slips through an operation panel. The original is read by a reading means 41 and the read contents are stored to a memory means 42 to be edited into a designated form **style** by an editing means 43. The edited contents are printed on an **individual** slip by a printer 44 and issued. The circulation of the slips are counted by a counting means 46 and then displayed. While the operator supplies the estimated circulation through a circulation input means 45. The input circulation is compared with the counted circulation by a comparison means 47. If no coincidence is obtained from the comparison, a fault is displayed.

Abstract (Basic): US 20050015596 A1

NOVELTY - Management of secure acquisition, storage and disclosure of confidential information, comprises bonding biometric signature to data storage device; requiring biometric signature of **individual** to access data record; controlling access to data storage device by using data console that is secure input/output device; maintaining credibility record associated with data record; and using metadata query to request disclosure of data record.

DETAILED DESCRIPTION - Management of secure acquisition, storage and disclosure of confidential information, comprises:

- (a) using a biometric generator to obtain a biometric signature of an **individual** ;
- (b) bonding the biometric signature to a data storage device;
- (c) requiring the biometric signature of the **individual** to access a data record stored on the data storage device;
- (d) controlling an access to the data storage device by using a data console, the data console being a secure input/output device;
- (e) maintaining a credibility record associated with the data record;
- (f) using a metadata query to request a disclosure of the data record; and
- (g) allowing the **individual** to control the disclosure of the data record.

INDEPENDENT CLAIMS are also included for the following:

(1) an apparatus for private information access rights management, comprising a biometric generator to analyze a unique biological characteristic of an **individual** and to generate a biometric signature for the **individual** where the biometric signature is reliably replicable; a data storage device to store a data record where the data record belongs to the **individual** and the data storage device is locked by the biometric signature; and a data console to control an access to the data record where the data console is a secure data input/output device and the access comprises one of a data query and a data entry; and

(2) an article of manufacture, comprising a machine-accessible medium including content that, when accessed by a machine, causes the

machine to generate a biometric signature of an **individual** ; bond the biometric signature to a data storage device; require the biometric signature of the **individual** to access a data record stored on the data storage device; control an access to the data storage device by a data console, where the data console is a secure input/ output device; maintain a credibility record associated with the data record; use a metadata query to request a disclosure of the data record; and allow the **individual** to control the disclosure of the data record.

USE - For managing secure acquisition, storage and disclosure of confidential information.

ADVANTAGE - The method makes personal or other sensitive information available to parties who need it without relinquishing control of the information or compromising our privacy and anonymity **presents** a unique **set** of challenges.

DESCRIPTION OF DRAWING(S) - The figure is a flow diagram illustrating initializing the biometric generator, an aspect of a method to be performed by a confidential information management system.

Abstract (Basic): JP 2004240816 A

NOVELTY - A memory stores meeting time set **individually** by several experts, and a presentation unit presents each stored time to **corresponding** expert who has set the time. A notification unit transmits an email indicating updating of set meeting time by **corresponding** expert, to other experts, when set time is updated. The stored meeting time are presented to all experts, when they are perfected by **corresponding** experts.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) expert meeting assistance apparatus;
- (2) expert meeting assistance method;
- (3) expert meeting assistance program; and
- (4) recorded medium storing expert meeting assistance program.

USE - For assisting expert meeting held in accordance with good clinical practice (GCP) specification, for clinical trial/study.

ADVANTAGE - Promotes rapid meeting time preparation, while ensuring security with respect to set meeting time.

DESCRIPTION OF DRAWING(S) - The figure explains the operation of the expert meeting supporting system. (Drawing includes non-English language text).

Designated States (Regional): DE FR GB IT

Abstract (Basic): EP 196430 A

A block is entered where a chart can be composed of draw graph objects such as lines, bars, circles etc. required to **present** a defined **set** of data in graph form. The user can then decide whether to represent data by enhancing some attribute such as **colour** , fill pattern character font etc., without changing the relationship between chart and data, or to change the representation.

The representation can be changed by selecting operations such as stretching, shrinking or sealing on areas of the graph pointed to by a cursor or mouse and modifying its relative **size** . If the new representation breaks the link between chart and data the programme forces up a message and the user is free to manipulate the image as a draw graph object without editing.

ADVANTAGE - Allows manipulation of graphical displays while maintaining data integrity. (8pp Dwg.No 0/7

ABSTRACT

PURPOSE: To reduce a load on a host processor in accordance with a use rate in each time zone by performing retry after the timing based on a timer set value **corresponding** to the present time in a timer table at the time of occurrence of a retry permitting error signal.

CONSTITUTION: When a retry request signal 132 is generated from a communication processing part 13, this signal is inputted to a timer management part 12 and the timer setting operation is performed by a timer setting part 121. The timer setting part 12 refers to a timer table 122 to detect a timer value in the time zone of the **present** time and **sets** it to a timer 123 and starts the timing operation. Retrying performed when the timer 123 expires. Plural pairs of time zone information and timer set values are stored in the timer table 122, and these time zones and set values are set in accordance with load quantities in **individual** time zones of an actual CPU.

ABSTRACT

PURPOSE: To discriminate **individual** operation systems (OSs) even if the trap number to be used by respective OSs are the same, and to execute a trap instruction properly by forming a means for discriminating an OS to which a trap instruction is generated and a trap interruption vector table or a trap number conversion table registering only the address of each trap processing in each OS.

CONSTITUTION: A flag indicating the OS executing a task at **present** is **set** up in a blank area of a system byte of a status register. Consequently, the OS to which the trap is generated can be discriminated. When the flag is '1', a secondary OS is defined by using a bit 11 e.g. The trap interruption vector table is used for applying an address for proper trap processing to each secondary OS. The contents **correspondingly** assigned to trap numbers 0-15 in a table heading are the processing addresses of 16 trap instructions generated to a certain OS.

ABSTRACT

PURPOSE: To check the circulation of slips by having comparison with a comparison means between the circulation counted by a counting means which counts the number of slips to be issued and the circulation which is supplied by a circulation input means.

CONSTITUTION: An operator studies the contents of an application for gift articles to designate the cancel or addition of the **gift** receivers and **sets** the application to an automatic original feed mechanism to designate the **style** of forms and sorting method of slips through an operation panel. The original is read by a reading means 41 and the read contents are stored to a memory means 42 to be edited into a designated form **style** by an editing means 43. The edited contents are printed on an **individual** slip by a printer 44 and issued. The circulation of the slips are counted by a counting means 46 and then displayed. While the operator supplies the estimated circulation through a circulation input means 45. The input

circulation is compared with the counted circulation by a comparison means 47. If no coincidence is obtained from the comparison, a fault is displayed.

...SPECIFICATION alarm condition is present and is 45 images per second when an alarm condition is **present**.

According to an additional aspect of the invention, there is provided a method of performing...as a two-dimensional array of pixel locations according to a 4:1:1 digital **color** video format, including circuitry for dividing the image plane into n rectangular regions having a...

...by the sequences of frames of the digital video data. Such events may

include alarm **conditions** , either indicated by alarm sensing devices, or generated by analysis of the data itself. A...

...say monthly, after the base line parameters are generated. The reference parameters may include a **color** histogram and a spatial frequency distribution, to detect "blooming" or loss of resolution, which may... hard disk, and the apparatus may further include a detection device for detecting an alarm **condition** . The control device may designate the buffer portion of the data memory device by maintaining...

...is located in the data memory device, and may respond to detection of the alarm **condition** by the detection device by changing a value of the pointer, so that the buffer...

...unit (MCU) employed in the VR/PC unit.

Fig. 23 represents a 4:1:1 **color** video data format employed in the VR/PC unit.

Fig. 24 is indicative of a **color** data format used for each MCU.

Fig. 25 is a pictorial representation of a first...processing carried on by the motherboard CPU in response to an indication of an alarm **condition** .

Fig. 76 is a pictorial representation of an allocation of a time-sequence of video data field recording slots provided as a standard response to an alarm **condition** .

Fig. 77 illustrates in flow-chart form processing performed by the motherboard CPU in connection...

...a flow-chart illustrating selective transmission of an incoming video stream in response to a **condition** detected by a live video analysis algorithm.

Fig. 105 is a flow-chart illustrating a...

...automatic change in a video data compression parameter in response to detection of an alarm **condition** .

Fig. 108 is a flow-chart which illustrates an automatically actuated software zoom-in operation in response to detection of a predetermined **condition** by a live video analysis algorithm.

Fig. 109 is a flow-chart which illustrates operation...

...automatically actuate a movement of a video camera in response to detection of a predetermined **condition** by live video analysis.

Fig. 110 is a flow-chart which illustrates operation of the system to take a predetermined action when respective predetermined **conditions** are detected by two different live video analysis algorithms.

Fig. 111 is a flow-chart...

...stream analysis when the camera providing the video stream is in motion or an alarm **condition** is detected.

Fig. 112 is a flow-chart which illustrates operation of the system to ...

...illustrates operation of the system to increase aggregate field through-put rate when an alarm **condition** is detected.

Fig. 114 is a flow-chart illustrating operation of the system to provide...

...the system to vary a display-buffer updating technique in dependence upon whether an alarm **condition** is detected.

Fig. 116 is a flow-chart which illustrates system priorities with respect to...

by analysis carried out on...

...or by a signal input by a user of this system to declare an alarm **condition** . In any case, when an alarm **condition** is detected, step 2336 follows step 2334. At step 2336, a script is retrieved from memory designating a camera or cameras which are relevant to the detected alarm **condition** , and also indicating updated compression algorithm parameters which are to be applied because of the detected alarm **condition** . Typically, the alarm-actuated compression parameters would be such as to provide improved image quality...contemplated that other logical combinations of analysis tools could be employed to detect an event **condition** , or to trigger a predetermined response, and so forth. For example, an event **condition** could be declared when any one of two or more tool "hits" are detected. This...

...the algorithm is to be applied is in motion; or when there is an alarm **condition** relevant to the camera. In Fig. 111, step 2354 indicates a determination whether an alarm **condition** relevant to a certain camera (designated camera X) is present. The alarm **condition** may be detected through an alarm sensor device, through live image analysis, or may be...

...image analysis algorithm to the live video stream generated by camera X. Where an alarm **condition** relevant to camera X has been detected, it may be beneficial to inhibit live analysis of the camera X video stream so as not to unduly prolong the alarm **condition** . Also, it may be desirable to inhibit live analysis of the camera X video stream...

INTERNATIONAL PATENT CLASS (V7): **G06F-017/30**

- ...SPECIFICATION alarm condition is present and is 45 images per second when an alarm condition is **present** .
- According to an additional aspect of the invention, there is provided a method of performing...as a two-dimensional array of pixel locations according to a 4:1:1 digital **color** video format, including circuitry for dividing the image plane into n rectangular regions having a...
- ...by the sequences of frames of the digital video data. Such events may include alarm **conditions** , either indicated by alarm sensing devices, or generated by analysis of the data itself. A...say monthly, after the base line parameters are generated. The reference parameters may include a **color** histogram and a spatial frequency distribution, to detect "blooming" or loss of resolution, which may...
- ...hard disk, and the apparatus may further include a detection device for detecting an alarm **condition** . The control device may designate the buffer portion of the data memory device by maintaining...
- ...is located in the data memory device, and may respond to detection of the alarm **condition** by the detection device by changing a value of the pointer, so that the buffer...unit (MCU) employed in the VR/PC unit.
- Fig. 23 represents a 4:1:1 **color** video data format employed in the VR/PC unit.
- Fig. 24 is indicative of a **color** data format used for each MCU.
- Fig. 25 is a pictorial representation of a first...
- ...processing carried on by the motherboard CPU in response to an indication of an alarm **condition** .
- Fig. 76 is a pictorial representation of an allocation of a time-sequence of video data field recording slots provided as a standard response to an alarm **condition** .
- Fig. 77 illustrates in flow-chart form processing performed by the motherboard CPU in connection...
- ...a flow-chart illustrating selective transmission of an incoming video stream in response to a **condition** detected by a live video analysis algorithm.
- Fig. 105 is a flow-chart illustrating a...
- ...automatic change in a video data compression parameter in response to detection of an alarm **condition** .
- Fig. 108 is a flow-chart which illustrates an automatically actuated software zoom-in operation in response to detection of a predetermined **condition** by a live video analysis algorithm.

...basis of the results of the analysis processes. A determination is then made whether the **criteria** are met (step 2130). If at step 2130 it is found that the **criteria** have definitely not been met, then there is no finding that the image characteristic of interest has been detected. If the **criteria** have definitely been met, then a step 2132 follows step 2130. At step 2132, detection...

...as represented by step 2192), that is, for each object/velocity set which met the **criteria** for indicating a violation of the perimeter, it is determined, at step 2194, whether the sensitivity (luminance) **criteria** were met. If so, a confidence level value is generated (step 2196), and the confidence...

...the "same" MCU portions of the difference images may be converted into an all black **condition** prior to JPEG encoding.
Turning to Fig. 99, an initialization step is performed (step 2220...

...making up the MCU or tile being processed are forced to values indicating a solid **color** black in the MCU or tile (step 2238).
Following step 2238 are steps 2240, 2242...causes video data compression parameters to be changed in response to detection of an alarm **condition**. As seen from Fig. 107, it is first determined, at step 2334, whether an alarm **condition** is detected. The alarm **condition** may be detected by input from an alarm sensor device, by analysis carried out on ...

...or by a signal input by a user of this system to declare an alarm **condition**. In any case, when an alarm **condition** is detected, step 2336 follows step 2334. At step 2336, a script is retrieved from memory designating a camera or cameras which are relevant to the detected alarm **condition**, and also indicating updated compression algorithm parameters which are to be applied because of the detected alarm **condition**. Typically, the alarm-actuated compression parameters would be such as to provide improved image quality...

...contemplated that other logical combinations of analysis tools could be employed to detect an event **condition**, or to trigger a predetermined response, and so forth. For example, an event **condition** could be declared when any one of two or more tool "hits" are detected. This...

...the algorithm is to be applied is in motion; or when there is an alarm **condition** relevant to the camera. In Fig. 111, step 2354 indicates a determination whether an alarm **condition** relevant to a certain camera (designated camera X) is present. The alarm **condition** may be detected through an alarm sensor device, through live image analysis, or may be...

...image analysis algorithm to the live video stream generated by camera X. Where an alarm **condition** relevant to camera X has been detected, it may be beneficial to inhibit live analysis of the camera X video stream so as not to unduly prolong the alarm **condition**. Also, it may be desirable to inhibit live analysis of the camera X video stream...

Language: English Document Type: Journal Paper (JP)

Treatment: Theoretical (T); Experimental (X)

Abstract: Project 2.3 of the Joint **Coordinating** Committee on Radiation Effects Research (JCCER) is a study of deterministic health effects among a cohort of Russia nuclear workers. The preliminary study population includes a stratified random sample of 221 radiation workers who were employed in a cohort of 8,055 workers at the Mayak PA facilities for at least one year during the period from 1948 to 1958, High annual doses, approaching 1 Gy per year from external and internal radiation sources, were reported for a significant proportion of the workers in this cohort. The **present** data **set** includes 96 cases of chronic radiation sickness (CRS), 14 cases of acute radiation syndrome (ARS) and 13 cases of plutonium pneumosclerosis (PPn). The remainder of the sample consists of "uninjured workers" who had no known history of radiation illness or injury; however, the uninjured workers are not "controls" for radiation exposure. The data base is currently being expanded to 600 **individuals** sampled from the cohort of workers from 1948 to 1958 to allow a more complete analysis of the deterministic health effects and comparisons with existing health effect models. The final data base will be used with state-of-the-art modeling techniques to determine threshold doses and dose-response relationships for key clinical diagnostic variables. (35 Refs)

Subfile: A

Descriptors: biological effects of ionising radiation; dosimetry; health hazards; personnel; physiological models

Conference Title: Proceedings of ICNN '98 - International Conference on Neural Networks

Conference Date: 4-9 May 1998 Conference Location: Anchorage, AK, USA

Language: English Document Type: Conference Paper (PA)

Treatment: Applications (A); Practical (P)

Abstract: We **present** a data **set** obtained from neurophysiological recordings made from single neurons in the human basal ganglia in relation to movements of the limbs during surgical procedures for Parkinson's disease. Data from both the pre-movement (movement preparation) phase and the post-movement phase were recorded in 25 cells in 9 patients. Using the generative topographic mapping algorithm (GTM), we show that the data **corresponding** to **individual** cells cluster in different parts of the map, which suggests that different cells have their own distinct firing pattern. The self-organising map as implemented by GTM appears to be a useful tool for visualising the responses of these neurons in relation to movement. (5 Refs)

Subfile: A C

Descriptors: biomechanics; neurophysiology; self-organising feature maps; surgery

Treatment: Practical (P)

Abstract: We **present** a **set** of program transformations which are applied automatically to convert abstract functional specifications of numerical algorithms into efficient implementations **tailored** to the AMT DAP array processor. The transformations are based upon a formal algebra of a functional array form, which provides a functional model of the array operations supported by the DAP programming language. The transformations are shown to be complete. We present specifications and derivations of two example algorithms: an algorithm for computing eigensystems and an algorithm for solving systems of linear equations. For the former, we compare the execution performance of the implementation derived by transformation with the performance of an independent, manually constructed implementation; the efficiency of the derived implementation **matches** that of the manually constructed implementation. (73 Refs)

Abstract: Engineering design problems, especially in the domain of civil engineering, are often solved by a group of **individual** participants with different expertise, loosely organized as a design team. In order to maintain the coherence of a design team, design participants' activities must be **coordinated**. In this paper the authors **present** a **set** of **coordination** mechanisms, developed from artificial intelligence techniques, that serve as a basis for computational systems to support both distributed and concurrent design teams. Cooperative design problem-solving tasks are defined, based on the concepts of commitments and conventions.

Coordination mechanisms for these tasks are developed by implementing

different artificial intelligence techniques, such as contract nets and partial global planning. A prototype system in the domain of structural engineering is introduced which serves as a test-bed for the **coordination** mechanisms. (20 Refs)

Subfile: C

Descriptors: groupware; intelligent design assistants; planning (artificial intelligence); structural engineering computing

Treatment: Experimental (X)

Abstract: Slow-streak photographic recordings of the lowest approximately 4-5 m of lightning channels in four triggered flashes are presented to document examples of microscale tortuosity variations (~10 cm or smaller geometric features). These recordings have both high spatial resolution (centimeter scale) and modest temporal resolution (~1.5 ms) such that the channel geometry is accurately rendered for most return strokes and their ensuing M-component events. The M-component events, verified as such from ancillary fast-streak data records, often show a significant enhancement of the microscale tortuosity relative to the previous return stroke channel. Channel length increases (two-dimensional) **corresponding** to the tortuosity enhancements are found to be as large as 55%, though the mean for 10 evaluations is 23%. In contrast, two M-component events show a marked overall reduction of the microscale tortuosity relative to an immediately preceding sequence of several discharge pulses along the same meter scale channel. Ensuing return strokes occurring along common but previously distorted channels also show a tendency for overall tortuosity reduction or straightening. These tortuosity variations appear to be unrelated to the presence of the vaporized trigger wire residue. Three primary mechanisms of tortuosity enhancement are examined: Z pinch magnetohydrodynamic instability (MHD), discharge generated turbulence, and ambient planetary boundary layer turbulence. The Z pinch instability is assessed quantitatively and may be a contributor through either the high current phase or integrated over a continuing current period. Three

variants of discharge generated turbulence also could be contributors, but a critical test of these mechanisms cannot be made with the **present** data set. Ambient planetary boundary layer turbulence appears unable to account for the observed tortuosity enhancements. An inductive mechanism of tortuosity reduction is also examined as a possible explanation for the disappearance of **individual** acute kinks or loops as well as overall channel tortuosity reductions. This mechanism cannot explain M-component related tortuosity reductions, but it might be a viable explanation for return stroke straightening given the much larger current derivatives involved. A full accounting of microscale tortuosity variations in lightning discharge channels remains to be achieved. (42 Refs)

Abstract: The set of names **corresponding** to the pictures from Snodgrass and Vanderwart (1980) were screen fragmented by means of a series of procedures implemented in Microsoft QuickBasic on a Macintosh microcomputer. Words were screen fragmented by deleting blocks of pixels from their images rather than by deleting **individual** letters. The screen-fragmentation procedure is particularly useful for the **present** set of words, in which a large proportion of the names of the pictures are short (fewer than five letters). The screen-fragmentation procedure can produce any number of fragmentation levels. In the present implementation, eight levels of fragmented images were produced, to **correspond** to the eight levels available for the Snodgrass and Vanderwart pictures. (24 Refs)

**BINOCULAR INTERACTIONS IN INDIVIDUALS WITH ANOMALOUS EARLY VISUAL HISTORY
(ABNORMAL VISION, INTEROCULAR TRANSFER)**

Author: WOLF, MARLA ELLEN

Degree: PH.D.

The **present set** of experiments used adaptation procedures to explore binocularity in **individuals** with abnormal binocular vision. The first series of experiments examined interocular transfer because this measure has been used previously to test for the presence of binocular neurons (Movshon, Chambers and Blakemore, 1972). Experiment I examined the test-retest reliability of this measure. Interocular transfer was found to be reliable. The results of Experiments II-IV clearly show that **individuals** with anomalous early visual history (A.E.H.) are capable of interocular transfer of a magnitude associated with normals.

Experiments III and IV also addressed the organization of binocular channels in **individuals** with varying levels of stereopsis. The results from Experiment III supported the presence of two binocular channels in Normal subjects whereas the A.E.H. group showed evidence for only one binocular channel. This pattern of results for the A.E.H. group was not as clear in Experiment IV, but the Normal group displayed data consistent with two binocular channels.

A different paradigm, alternating monocular adaptation, was used in Experiments V and VI in a further attempt to evaluate the number of binocular channels present. The results from Experiment V were quite clear.

Individuals without stereopsis showed evidence of only one binocular channel and the Normal group portrayed the pattern of results indicative of two binocular channels. The results from Experiment VI were equivocal regarding both the Normal and A.E.H. group.

Experiment VII revealed that all subjects of the A.E.H. group were capable of obtaining a level of binocular summation associated with probability summation. The Normals showed summation levels indicative of neural summation. In Experiment VIII, the data show that if the stimuli presented to each eye are not spatially **matched**, then summation decreases. However, this was true only for the Normal group. The Stereoblind group maintained a level of probability summation throughout the stimulus phase shifts. The final experiment used subthreshold summation and adaptation procedures to affect the purely binocular channel in order to reduce summation. Summation decreases after adaptation of this channel, but remains unchanged if this channel is not adapted. The results for the Stereoblind group were the same as the Normal group, suggesting that Stereoblinds maintain a binocular channel affected by simultaneous stimulation.

These results clearly show that **individuals** with anomalous early visual histories show evidence for binocular channels previously thought to be absent.

PHYSICAL MAPPING AND TRANSCRIPTIONAL ANALYSIS OF THE PHOTOSYNTHETIC PIGMENT GENES OF RHODOBACTER CAPSULATUS

Author: CLARK, WILLIAM GREGG

Degree: PH.D.

Year: 1992

Corporate Source/Institution: SAINT LOUIS UNIVERSITY (0193)

Adviser: BARRY L. MARRS

Source: VOLUME 54/01-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

Descriptors: BIOLOGY, MOLECULAR; BIOLOGY, GENETICS

Descriptor Codes: 0307; 0369

The purple, non-sulfur, photosynthetic bacterium *Rhodobacter capsulatus* (formerly *Rhodopseudomonas capsulata*) develops a specialized intracytoplasmic membrane bearing its photosynthetic apparatus (PSA) by incorporation of various pigment and protein components into its cytoplasmic membrane. This differentiation occurs under low pO₂ conditions.

The work of Barry Marrs resulted in the synthesis of a fine structure genetic map for the genes involved in carotenoid and bacteriochlorophyll biosynthesis in *R. capsulatus*. Subsequently, Marrs isolated a P-group plasmid, pBLM2, capable of mobilizing large segments of *R. capsulatus* chromosomal DNA. Genetic crosses using this plasmid facilitated the isolation of an R-prime plasmid, pRPS404, that contained *R. capsulatus* chromosomal DNA bearing many genes important to synthesis and assembly of the PSA.

Physical mapping of the *R. capsulatus* DNA carried by pRPS404 was performed utilizing a restriction fragment mapping strategy termed "walking". This involved exploiting the regions of overlap present between two sets of pRPS404 restriction fragments utilizing Southern blot technology. In addition, many of the individual restriction fragments were ligated into plasmid vectors and mobilized into various PSA mutants to score for complementation of the mutant phenotype. In this manner, the physical restriction map of the *R. capsulatus* chromosome was aligned with the fine structure genetic map of the photosynthetic pigment genes.

Whether induction of the synthesis of PSA components under low pO₂ was controlled at the transcriptional level was determined by using restriction fragments, bearing genes pertinent to PSA formation, as probes for mRNA synthesized prior to, and following, a drop in pO₂. The results showed that transcriptional regulation is involved in the biosynthesis of some PSA components, but not all. Carotenoid biosynthetic genes showed no change in transcript levels, bacteriochlorophyll biosynthetic genes showed a modest transient increase and structural proteins showed a significant, continual increase in transcript levels.

In order to make quantitative predictions of changes in vegetation on the basis of planned or anticipated changes in the habitat, it is necessary to formalize the dependencies of the vegetation on the habitat. In the present work a model is set up for an area of approx. 100 km² around Davos in the Swiss Alps.

An overview is provided of the climate, geology and the soils in the investigated area. A syntaxonomical overview of all vegetation units and a synoptical table of all phytosociological samples from the area published to date provide a picture of the simulated vegetation.

The available habitat variables in the form of digital grid maps with a resolution of 50 m x 50 m obtained from the Swiss MaB project are discussed in respect of their significance to the simulation of vegetation.

By means of the vegetation model based on a Bayes classifier, it was possible to simulate successfully the distribution of vegetation types in the landscape. The model enables diverse variable types and any distribution functions to be processed. The preassumptions for the application of the model, the transferability, and methods for a priori and a posteriori selection of variables are discussed and investigated for the **present data set**. Vegetation mapping, prediction of scenarios (e.g. climatic warming), and probability maps for **individual** types of vegetation are introduced as possible applications of the model.

The ecological preference function, which quantitatively describes the ecological amplitude and the optima of the vegetation types, can be derived from the model parameters.

In a second modelling approach, the Bayes classifier is linked with a canonical **correspondence** analysis. This model is based on metrical soil data and phytosociological samples. It represents a non-linear projection of the ecological space onto the floristic space. A multistage process makes possible the visual control of the simulation.

The data base and the display system developed for this study for representing digital maps on a μ -VAX graphic work station are described in the appendix.

A THREE-DIMENSIONAL MODEL FOR THE TREATMENT OF ALCOHOLISM

Author: EVENSON, MARILYN M.
Degree: PH.D.
Year: 1982
Corporate Source/Institution: THE FIELDING INSTITUTE (0565)
Source: VOLUME 43/10-B OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 3357. 117 PAGES
Descriptors: PSYCHOLOGY, CLINICAL

Descriptor Codes: 0622

Following a current trend in research as to what makes up the alcoholism recovery process, the **present** study **set** out to: (1) identify factors of the recovery process and explore how they would change over time, including drinking and sobriety of the recovering **individual** ; and (2) to begin to develop a model of the recovery process that would reflect the important factors and changes of recovery. An effort was made to condense and operationalize the important information regarding recovery. Three factors, drinking, craving, and pathological lifestyle, were chosen as the scope of the study.

The study investigated, over a period of five years (four years prior to sobriety, one year prior to sobriety, and one year after sobriety) the changes in drinking, craving, and pathological lifestyle as experienced by recovering alcoholics. Also investigated was how these three variables interacted with each other--that is, did an increase in one component **correspond** to an increase in another? Twenty male and female primary alcoholics who were sober 1-2 years were selected through a questionnaire and interview screening process. An interview procedure using key events to help anchor subjects' memory was used so they could more accurately identify the intensity of their drinking, craving, and pathological lifestyle.

Multiple time series analysis was applied to the data. The statistical procedure was chosen for its substantive and methodological soundness. The Box-Jenkins and the Box-Tiao techniques were applied.

The results showed that prior to sobriety, pathological lifestyle increased intensely but drinking or craving did not increase. The results regarding the first year of sobriety showed that there was a definite decrease in craving within the first couple of months. Pathological lifestyle showed a slow decline during the first few months of sobriety up to about 6 months, and then a steadily declining pattern. The results indicate that both craving and pathological lifestyle are key factors in the maintenance of sobriety and that pathological lifestyle appears to be the more important factor. The results did not indicate an interrelationship between the three variables.

The current study does not provide the systematic information necessary to construct a model of alcoholism recovery process; however, it does suggest directions toward that effort.

**FACTORS AFFECTING IDENTIFICATION AND DISCRIMINATION OF SYNTHETIC SPEECH
STIMULI BY NORMAL HEARING AND HEARING IMPAIRED LISTENERS**

Author: DEMPSEY, JAMES JOSEPH

Degree: PH.D.

Year: 1982

Corporate Source/Institution: THE UNIVERSITY OF CONNECTICUT (0056)

Source: VOLUME 43/08-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2492. 144 PAGES

Descriptors: HEALTH SCIENCES, AUDIOLOGY

Descriptor Codes: 0300

This study was designed primarily to investigate the effects of presentation mode, presentation level, and formant proximity upon identification and discrimination of synthetic speech stimuli by listeners with varying degrees of hearing sensitivity. A secondary purpose was to

look at the relationships between average deviation in identification function and certain audiological variables. The data were collected from six normal hearing subjects, six subjects with moderate hearing losses, and six subjects with severe hearing losses. Responses were obtained from every subject for all possible treatment combinations. The primary method of analysis for both the identification and the discrimination functions was a repeated measures analysis of variance. Further analysis for the identification functions was performed using a curve comparison program which tested for significant differences in over-all function shape. A multiple regression was computed to assess the relationships between the dependent and the independent, audiological variables.

The results of the present investigation indicated that presentation level effected a listener's ability to identify and discriminate synthetic speech stimuli in a manner supportive of the upward spread of masking paradigm. Presentation mode had no significant effect upon a listener's ability to identify or discriminate the stimuli. Evidence of variations in upward spread of masking due to different formant proximities was demonstrated through the curve comparison program. Discrimination ability was shown to be best between categories and poorest within categories, demonstrating that these synthetic speech stimuli meet the criteria necessary for true categorical perception. Hearing impaired listeners evidenced differences between their discrimination and identification abilities which suggest that they may be able to resolve spectral differences between signals but that the auditory signal may become so distorted as to not **match** the stored phonetic representation. All six audiological variables together were significantly related to the dependent variable (deviation from the referent identification function) and accounted for approximately 66% of the variance in the dependent variable. It was impossible with the **present** data **set** to determine relationships between **individual** independent variables and the dependent variable.

Locating or tracking submerged submarines by aircraft requires the use of complex navigational systems and the monitoring and integration of information for making decisions in "real time," by Naval Flight Officers who specialize in anti-submarine warfare. The purpose of the investigation was to learn what information and subproblems the tactical **coordinator** of the aircrew attends to when he is engaged in this problem-solving task, and how such behavior varies depending upon experience and time constraints. The study included an extensive analysis of the principles of airborne tactical navigation, and the implementation of a set of computer programs capable of maintaining the graphically displaying simulated interactive scenarios which respond in much the same way as the tactical navigation system in the aircraft. The computer programs were subsequently used to

present a **set** of scenarios and to collect the sequence of responses obtained from each tactical **coordinator** who was studied. Each subject prosecuted scenarios in each of two conditions. In one of these he was permitted to stop the scenario at any time to think or seek information. In the alternate condition he was provided no such opportunity. The data were compared within and across subjects and scenarios, and also compared with the processes and plans which might be employed if one followed a hypothetical model, unconstrained by time. It was found that subjects behaved relatively consistently across scenarios. No differences were found across the two conditions. The number of distinct items of information requested increased with experience, as did the incidence of obtaining information early in the scenario in anticipation of needing it later. Large **individual** differences were observed on most dependent variables. The experts appeared to make about as many errors in executing their plans as did the novices, but the plans of the experts were more comprehensive.

EQUILIBRATION AND INTELLIGENCE: INDIVIDUAL VARIATION IN CONSERVATION DEVELOPMENT AS A FUNCTION OF CA, MA, AND IQ

Author: ROBERTS, CAROL HATCH

Degree: PH.D.

Year: 1981

Corporate Source/Institution: BRYN MAWR COLLEGE (0025)

Source: VOLUME 42/08-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3461. 441 PAGES

Descriptors: PSYCHOLOGY, DEVELOPMENTAL

Descriptor Codes: 0620

Jean Piaget has stated that equilibration is the stage-independent process which characterizes all cognitive change. Flavell and Wohlwill have proposed a model which describes **individual** variation in equilibration as it manifests itself in the first appearance and ultimate generalization of concepts. Based on a competence/performance distinction, the model predicts that, once the necessary structures are present, the rate and quality of their generalization is a function both of the child and the particular task. Herman Epstein's work on stages of brain growth points to a physiological basis for the first appearance of stage-specific structures. Other research has produced evidence that the rate of application of those structures is related to mental age as well as to chronological age. The research of Roger Webb further states that while very bright children in the psychometric sense do not develop competence (structures) significantly earlier than other children, the rate at which competence becomes generalized performance is directly a function of their superior intellect.

The **present** study **set** out to test the hypotheses that stage entry and exit are related to chronological age, and that across-domain progress and within-domain generalization of the concept conservation are related to MA and IQ respectively. One hundred and six 3-6 to 7-11 year old children with Binet IQ's ranging from 90 to 159 and mental ages from 4-0 to 12-11 were **individually** administered a 35-item test of conservation containing five items of varying levels of difficulty in each of the domains of number: provoked and unprovoked **correspondence**, discontinuous quantity, liquid, substance, weight, and volume. All tasks required both a judgment and an explanation. A formal operational task was also included. One year later a group of 21 children chosen for chronological or mental

age **match** was retested. Scores were calculated for total number of correct judgments and explanations and for number of domains in which a child could conserve at least one item. While the ages of those children who did not conserve at all, and those who could conserve number, only, were identical, there was a highly significant CA and MA (but not IQ) difference between those conserving not at all, or number, only, and those conserving within the first four domains, only. The chronological age of 5-10 and the mental age of 7-6 characterized the latter group. For the entire sample, CA and MA were equally predictive of both across- and within-domain progression, but within single-year CA groups, MA and IQ were strongly predictive of both types of progress. Their influence was greatest at 4 and 5 years. (Within all MA groups, however, older children did better.) In one year the young, bright longitudinal group moved from a level of conservation performance near their average IQ CA-mates to one not significantly different from their average IQ MA-mates. The rate of their application of concrete operational structures was rapid, but the direction was primarily across, rather than within domains.

The results of this study indicate that cognitive change is strongly related to maturation, both physical and mental, and that while physical maturation does indeed set the limits within which structural potential appears, mental age determines the rate at which competence becomes performance. Although the influence of mental age in the development of conservation is of decreasing magnitude (since the concept is part of a universal repertoire) the long-range influence of intelligence in the psychometric sense may well be played out in the fluidity of the equilibrative process. In bright children this fluidity represents the potential for rapid extension of stage-specific structures to novel content yielding an enhanced network of schemes which increasingly open new possibilities for disequilibrium and further cognitive enrichment.

IN PURSUIT OF POWER: COUNTERAGGRESSION AND POWER ENHANCEMENT

Author: FAGENSON, ELLEN ANDREA

Degree: PH.D.

Year: 1981

Corporate Source/Institution: PRINCETON UNIVERSITY (0181)

Source: VOLUME 42/03-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1230. 69 PAGES

Descriptors: PSYCHOLOGY, SOCIAL

Descriptor Codes: 0451

It is well-documented in the empirical literature that attacks elicit aggressive responses. To date, most of the research in the area of attack instigated aggression has examined the effect different types and intensities of attacks have on promoting counteraggressive responses. In contrast, very little research has been aimed at identifying why **individuals** counteraggress in response to attack, or what can be done to deter attack victims from counteraggressing. The present experiment was conducted to test the major propositions of a theory, i.e. power restoration theory, which has addressed both of these issues.

According to power restoration theory, each **individual** has a legitimate amount of power within a given social environment. When an **individual** is attacked, his power is reduced. Since power begets satisfaction, an **individual** is motivated to restore his power to its pre-attack level. This can be accomplished by counteraggressing. That is,

an **individual** can achieve his power restoration goal by engaging in activities that enhance his power relative to the attack instigator. Counteraggression is posited as one among a class of activities that has this potential.

The present experiment was conducted to test the power restoration hypothesis, that **individuals** counteraggress to enhance their power relative to the attack instigator's position. Subjects received either an insulting (attack) or non-insulting (no-attack) evaluation from a confederate of the experimenter on an essay composition task. Prior to being given an opportunity to aggress against this **individual**, subjects engaged in a problem-solving activity that either enhanced their power relative to the essay evaluator (relevant power), did not affect their position of power (zero power), or enhanced their power relative to an **individual** who had not been involved in the initial essay evaluation task (irrelevant power). It was predicted that if counteraggression **corresponds** to a need to enhance power relative to the attack instigator, then an **individual**'s level of counteraggression should be reduced to the extent that this goal has been attained.

The results of the experiment supported the hypothesis derived from power restoration theory. Also, some support for the notion that power enhancement in general can deter an attack victim from counteraggressing was obtained. The capacity for alternative theories of aggressive behavior to account for the **present set** of findings was discussed. In addition, the general implications of power restoration theory were considered.

**OCCUPATIONAL ALCOHOLISM: AN EVALUATION OF TREATMENT FOR ALCOHOLISM ON
SUBSEQUENT SURVIVAL ON THE JOB**
Author: SENTER, MARGARET GENE
Degree: PH.D.
Year: 1980
Corporate Source/Institution: THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL
HILL (0153)
Source: VOLUME 42/02-B OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 583. 422 PAGES
Descriptors: HEALTH SCIENCES, PUBLIC HEALTH
Descriptor Codes: 0573

The **present** study originally **set** out to determine the effects of treatment for alcoholism on job survival by comparing three groups of subjects: Alcoholics who have not undergone treatment, Alcoholics who have undergone treatment, and Nonalcoholics.

The occupational setting from which the data set for this study came required that all employees confronted for alcoholism enter treatment, so a pool of alcoholics who had been confronted but not treated was not available for study.

Due to this limitation in availability of subjects, the job survival experience of treated alcoholics was compared to the job survival experience of nonalcoholics. Such a comparison does not sufficiently control for the isolated effect of treatment on job survival. The study can only determine employment survival on nonalcoholics compared to the employment survival of a group of subjects who have experienced alcoholism, job probation, and treatment for alcoholism.

An historical follow-up study design was used to investigate job

survival in alcoholics and controls over an 18 year period of time. The period of observation began January 1, 1958 and ended December 31, 1975. Alcoholics were confronted all through the 18 year period of observation and provided variable periods of follow-up.

Alcoholics observed in the study were all alcoholics entering the company program for alcoholism between January 1, 1958 and December 31, 1975. This amounted 614 alcoholics. An equal number of nonalcoholic controls were chosen as a comparison group. Controls were **matched** to alcoholics on five different variables: work location, years worked prior to study entry, occupational/salary level, age, and sex. Once a control was **matched** to an alcoholic, his date of entry into the study was set as the date the companion alcoholic entered the company program.

A cohort life table analysis was used to compare alcoholics and controls with respect to job survival over the 18 year period of observation. The main finding from the life table analysis was that controls consistently fared better than treated alcoholics as far as job survival. The proportion of controls surviving was always higher than the proportion of treated alcoholics surviving throughout all years of follow-up.

It should be noted, however, that although this trend was consistent throughout all of the different categories of subjects which were compared, the difference between controls and alcoholics was not always a statistically significant difference in some of the **individual** subject categories.

Categories of subjects for which there was no statistically significant difference between proportions of controls and alcoholics surviving included: Female employees, Employees aged 30-39, Employees aged 60-69, Employees in High Level Management, and Employees perceived to have less of a drinking problem to begin with.

Categories of subjects for which there was the greatest discrepancy in proportions of controls and alcoholics surviving (and for which there was a statistically significant difference between controls and alcoholics) were: Blue Collar employees, Age group 18-29, Age group 40-49, and Employees with Masters or Doctoral degrees.

A multiple regression analysis was used to characterize the relationship between the dependent and independent variables in the sense of determining the extent, direction, and strength of the association among the variables. The regression analysis found that the independent variables in the study accounted for approximately 22 percent of the variability in the dependent variable (number of years employed following study entry). The three most important variables influencing length of employment survival were the professional level of employment, an interaction between age at time of diagnosis and professional level of employment, and alcoholic or control status of the employee.

Abstract: The importance of parasitic mode losses for the design and operation of electron-positron storage rings is now well recognized. These losses at **present set** the limit on allowable beam current in the SPEAR II ring under some operating **conditions**. Parasitic mode losses and their potential deleterious effects are a prime consideration in the design of the PEP vacuum chamber. Too high a loss impedance can lead not only to overheating of **individual** components but to a reduced threshold for bunch instabilities. It is important therefore to have available adequate measurement and computational methods, both as an aid in the design of specific vacuum chamber components and to provide a better understanding of the nature of the loss impedance. The out-group must not be so bad after all: Generalization of the effects of disclosure, typicality and salience on intergroup attributions

Author: Ensari, Nurcan

Degree: Ph.D.

Year: 2000

Corporate Source/Institution: University of Southern California (0208)

Adviser: Norman Miller

Source: VOLUME 63/02-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1086. 125 PAGES

Descriptors: PSYCHOLOGY, SOCIAL

Descriptor Codes: 0451

ISBN: 0-493-54910-2

The **present set** of studies examined how cooperative contact

improves relations between groups and, most importantly, under what **conditions** the positive effects of contact will generalize to the group as a whole. These studies proposed a new model that integrates the **personalization** (Brewer & Miller, 1984) and the category-based models (Hewstone & Brown, 1986). According to the new model, greater generalization can be achieved by the combined effects of disclosure and typicality (Study 1), or by the combined effects of disclosure and salience (Study 2).

Study 1 was conducted in Istanbul, and religiosity was the key social category. A typical or atypical islamic out-group member who performed a successful task either disclosed personal information, or gave impersonal information to the secular participant. Disclosure had greater impact on perceptions of the group as a whole after interacting with a typical islamic student. As predicted, the impact of self-disclosure and typicality combined interactively to augment generalized intergroup acceptance.

Study 2 extended these findings by examining the combined effects of disclosure and category salience on generalization, and used political orientation as the key social category. The results showed that liberal participants' tendency to generalize a successful outcome of an atypical republican to the group as a whole increased as a result of disclosure and high salience. That is, generalization was achieved by the combined effects of disclosure and salience, even in the absence of typicality. In addition, Study 2 explored the mediational role of group-relevant and person-relevant information on the effects of typicality and disclosure respectively.

While Study 3 replicated these findings, in addition, it investigated the effects of negative feedback on in-group failure versus positive feedback on out-group success. Although the results replicated the previous findings in the positive feedback **condition**, there was no hint of intergroup bias under **condition** of negative feedback. In conclusion, this set of studies showed that disclosure, typicality and salience are the key factors that play a critical role in reducing intergroup bias.

AN EXPERIMENTAL ANALYSIS OF THE EFFECTS OF TWO TYPES OF INTERPRETATION IN THE CONTEXT OF AN ACCEPTANCE-BASED PSYCHOTHERAPY

Author: HACKBERT, LUCIANNE

Degree: PH.D.

Year: 1998

Corporate Source/Institution: THE UNIVERSITY OF NEW MEXICO (0142)

Adviser: MICHAEL J. DOUGHER

Source: VOLUME 59/11-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 6066. 100 PAGES

Descriptors: PSYCHOLOGY, CLINICAL

Descriptor Codes: 0622

While many psychotherapists can agree that interpretive statements are an important aspect of the psychotherapeutic process, there are many divergent ideas about what constitutes a good interpretation and why making interpretations is thought to be an effective therapeutic strategy. Efforts to demonstrate the features and characteristics of successful interpretations have not been conclusive. Recent efforts to empirically demonstrate the immediate effects of interpretation have produced results that suggest that these effects differ significantly across **individuals**. While interpretation has been included as a component within a variety of treatments with demonstrated efficacy, the question of how interpretation relates to outcome remains largely unanswered. Many of these previous

experiments were limited by nomothetic designs and correlational analysis. In the **present set** of experiments, a single subject design was used to investigate the effects of two types of interpretation in the context of an acceptance-based psychotherapy using emotionally avoidant clients. Repeated assessment of client's coping strategies outside of therapy and detailed measures of emotional expression within session allowed for an investigation of changes in response to therapeutic strategies. The effects of intratherapy interpretations (i.e., those relating specifically to the therapeutic relationship and behavior occurring in the room) and extratherapy interpretations (i.e., those describing patterns of behavior in relationships other than the therapeutic relationship) were evaluated using an ABC design. This design was replicated across three subjects, however, insufficient treatment integrity in one case reduced the interpretability of results. In one case, time-series analysis showed a statistically significant increase in emotional expression during the intratherapy interpretation **condition** and no effect of extratherapy interpretations. In the second case, a statistically significant decrease in emotional expression was evident during both interpretive **conditions**. There were no statistically significant differences in either client's use of coping strategies during the brief treatment. The lack of consistent results makes causal conclusions on the basis of these results premature. However, the **individual** difference in response to two types of interpretation are offered as informative preliminary data indicating the need for further analysis using the methodology of single-subject design. Further replications of the design used here could elucidate potential variables that contribute to the effects of different types of interpretive strategies.

CROSS-DIMENSIONAL INTERFERENCE IN A FOCUSED ATTENTION TASK (VISUAL PERCEPTION)

Author: SHOUP, RACHEL ELIZABETH

Degree: PH.D.

Year: 1996

Corporate Source/Institution: INDIANA UNIVERSITY (0093)

Chair: RICHARD SHIFFRIN

Source: VOLUME 57/12-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 7753. 98 PAGES

Descriptors: PSYCHOLOGY, EXPERIMENTAL

Descriptor Codes: 0633; 0623

This research concerns the interaction between two different types of attention in visual perception: attention to spatial locations and attention to particular dimensions (e.g., **color** or shape). Prior research in our lab has demonstrated that when **individual** features from different dimensions are assigned to overlapping responses (e.g., X & red = Response 1 and O & blue = Response 2), the reaction time to a particular feature (e.g., red) at a cued location is unaffected by the nearby presence of a competing feature whose response assignment is based on a different dimension (e.g., O). The **present set** of experiments was designed to investigate whether cross-dimensional interference occurs when competing features appear in the same location, and subjects are instructed to attend to only one dimension. The results indicate that although subjects cannot prevent cross-dimensional interference from occurring in this situation, the interference can be greatly reduced under optimal circumstances. The

results also support our earlier findings that competing features at irrelevant locations do not interfere with reaction time, and that within-dimension interference (e.g., the effect of a blue object on the response to a red object) is generally larger than cross-dimensional interference. A further interesting finding is that relevant features (those which are associated with responses) from a to-be-ignored dimension tend to draw attention to that dimension relative to irrelevant features. The results are discussed in relation to research in the literature concerning the roles of spatial and dimensional attention in visual perception. In addition, the findings are used to expand upon an earlier model of attentionally based response selection.

A MODEL OF SELF-BLAME AS THE COMBINATION OF AFFECTIVE AND COGNITIVE FACTORS (GUILT)

Author: LAFONTANA, KATHRYN MARY

Degree: PH.D.

Year: 1995

Corporate Source/Institution: THE UNIVERSITY OF CONNECTICUT (0056)

Source: VOLUME 56/11-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 6463. 119 PAGES

Descriptors: PSYCHOLOGY, SOCIAL

Descriptor Codes: 0451

Researchers who have studied the phenomenon of self-blame have discovered a number of instances in which an **individual** feels guilty and deserving of blame, despite the presence of mitigating factors such as a lack of foreseeability or control. The purpose of the **present set** of studies is to understand why such irrational self-blame occurs. Based upon dual mode processing theories such as that by Robert Zajonc, a model is developed in which self-blame is presumed to be the combination of an immediate, affective response to the emotional intensity of the negative outcome, and a more reflective, cognitive response, in which the **individual** considers the role of factors which might mitigate the assignment of blame. This secondary cognitive response will occur only if the **individual** has sufficient time and cognitive capabilities.

Two experiments were performed to determine whether separate affective and cognitive responses do occur. In both experiments, participants played a series of computer games in which they believed the outcome of the games would determine the number of experimental participation credits another participant was to receive. In Experiment 1, the intensity of the outcome (in terms of the number of games lost) was experimentally manipulated. Results showed that this outcome was directly related to how guilty and blameworthy participants felt, but was unrelated to how much responsibility participants attributed to themselves.

In Experiment 2, half of the participants were led to believe that the games were based on skill and that they had a greater degree of control over the outcome. The actual outcome was the same for all participants. Those in the high apparent control **condition** attributed more responsibility to themselves than did participants in the low apparent control **condition**, but there was no difference in the guilt feelings they experienced. The degree of cognitive load was also manipulated, but this variable had no effect in either experiment. Results are discussed with respect to how this model may be used to understand better the phenomenon of self-blame, and to assist both clinical and nonclinical populations.

A HOLISTIC VIEW OF HEALTH: PSYCHOSOCIAL FACTORS AND PHYSICAL HEALTH

Author: BLOTCKY, ALAN DAVID

Degree: PH.D.

Year: 1980

Corporate Source/Institution: GEORGE PEABODY COLLEGE FOR TEACHERS (0074)

Source: VOLUME 42/02-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 757. 80 PAGES

Descriptors: PSYCHOLOGY, CLINICAL

Descriptor Codes: 0622

The present study empirically examined six psychosocial factors (ego strength, life stress, developmental stress, socioeconomic status, family functioning, and sex) in relation to physical health and physical illness in a non-clinical sample of college students. The larger objective of this project was to begin to establish a holistic model of health that includes important psychosocial characteristics of the **individual**. Seventy-two undergraduate and graduate students were voluntarily recruited and administered a series of self-report questionnaires in a group setting. The results unambiguously indicate that psychosocial characteristics of the **individual** are significant correlates of physical health/illness. Using multiple regression analysis, highly significant multiple correlations were obtained between the set of six psychosocial predictors and seven physical health **criteria** (R_s ranged from .56 to .86, $p < .01$). More specifically, it was found that the measures of ego strength, life stress, socioeconomic status, and family functioning were the statistical contributors to the state of physical health. In contrast, developmental stress and sex proved to have no predictive value. The nature of the association between the four significant factors and physical health appeared to vary according to the particular health dimension in question. The measures of ego strength, life stress, and socioeconomic status significantly contributed to the prediction of overall illness in the past year as well as the occurrence of temporary or acute physical illness (e.g., flu, appendicitis, bladder infection, etc.). The functioning of the **individual**'s family proved to be the best predictor of the duration or length of recovery associated with illness episodes. Chronic illness (e.g., asthma and hypertension), in contrast to acute illness, was less predictable on the basis of the **present set** of psychosocial variables, suggesting that these illnesses may be more structural and less psychosocial in nature. Based on the present results, a psychosocial model of physical health is proposed and implications for a holistic view of health are discussed.

Storyopolis, LA's Hottest Art Gallery and Children's Bookstore, Wraps

Individual Libraries Into Book Bushels for Unforgettable Holiday Gifts

Snapped Up Locally by Celebrities, Book Bushels Now Available Online

LOS ANGELES, Nov. 10 /PRNewswire/ -- Storyopolis, Los Angeles' premier art gallery and children's bookstore, located on LA's hip Robertson Blvd., and a local favorite among celebrities, socialites and politicians alike, offers the gift of imagination with this year's Storyopolis' Book Bushels, available online at www.storyopolis.com -- just in time for the holiday season. First made famous on the Oprah Show, and previously only available by phone or in the LA store, the exclusive Storyopolis Book Bushels, that became a "must-have" item for "A"-listers, will now extend its reach into all corners of the nation.

"Giving the gift of imagination has no equal. Unlike toys that eventually get outgrown or discarded, books have that lasting fascination for children and for the young-at-heart adults," said Matthew Abramowitz, Storyopolis' president. "Moreover, instilling the love of reading has a lasting impact on the development of a child and triggers the lifelong appreciation of books well into adulthood."

Customers can hand-pick each Book Bushel's contents, or simply provide the child's age, gender and interests and Storyopolis' Book Bushel wizards will do the rest.

Book Bushels are packaged in charming miniature cardboard suitcases, fruit bushel baskets and hatboxes. Storyopolis' Book Bushels generally range from \$75 to \$300.

(Due to computer glitches if you do not receive a confirmation email within two days, your order has not made it to our system. Please try again or call the store to place your order.)

Practical, yet impressive, hip but classic -- a library and mind-expanding experience wrapped up in ribbon and cellophane... Our Book Baskets are 'custom-stuffed' to fit every age, taste, occasion, and budget (starting around \$75).

As seen on *Oprah* and in *In Style* magazine, the Storyopolis Book Basket is not another muffin, wine-cheese, coffees-of-the-world, fruit-basket, monogrammed-towel, pen-set. Your gift will be remembered. Your calls will be returned. And you might actually get a thank-you note!

(Due to computer glitches if you do not receive a confirmation email within three days, your order has not made it to our system. Please try again or call the store to place your order. If you basket is a rush order, please call the store to confirm within three hours of submitting your order!)

With as little information as your budget, and the age and sex of the recipient, we can do all the work for you -- and you get all the credit! Please note that because our Book Baskets are custom-created, the items pictured here are examples only, actual products will vary.
